KREATION

“Learning Beyond Boundaries”

Kreation is a forward-thinking and constantly innovative place where students don’t need to bind down with the same old ideologies proposed to them. As young adults, it is almost impossible to ignore the never ending cycle we are stuck in with the sole purpose of: being born, getting a job, building a family and then dying in the end. To me, life should feel more than just an obligation because looking at a bigger picture, I can’t help but notice the amount of possibilities each individual holds.

Hence, I propose an innovative school that doesn't just allow individuals to build their identity but also allows them to enter the real world to find their purpose and potential careers. Kreation aims to help young people to discover their interests, develop practical skills, explore different career paths, and understand how they can contribute to the world around them. Teenagers should have the freedom to question, experiment, create, fail, and discover their own potential.

Through a combination of academic learning, artistic expression, real-world projects, mentorship, and community engagement, students learn to connect what they study with how the world actually works. The goal is not to tell students what they should become. It is to give them the tools, experiences, and confidence to decide for themselves. Kreation as a school would incorporate multiple art programs which include: Studio Art, Music, Dance, Film, Photography, Theatre, Marketing, Entrepreneurship, Architect and more.

Instead of every student working on the same assignment, the students are divided into specialized teams. Each team has its own responsibilities, but no team can complete the overall project alone. This would allow them to develop teamwork skills and understand the real world through building true experience.

However, many might think that incorporating academic courses into such innovative courses is a challenge but we think a mathematics lesson would become relevant when the finance team needs to calculate whether the hub is affordable. An English lesson becomes relevant when the marketing team writes a funding proposal. Science becomes relevant when the architecture team investigates lighting, acoustics, insulation, or materials. Putting such courses together and finding innovative ways to connect them can help make learning much more engaging and help students build confidence in their skills.

Social benefits Kreation as a program offers are:

- Personal Growth and Self Discovery
- Real World Experience and Career Exploration
- Improved Teamwork and Communication
- Meaningful Education
- Artistic Expression

In terms of environmental impact, Kreation encourages students to design, create and build in sustainable ways and instead of focusing on the final product which in the real world often includes capitalism, usage of artificial resources and fast fashion. Kreation as a program would encourage students creating durable, adaptable, and timeless products rather than disposable items. Designing for longevity reduces the need for frequent replacements and conserves resources. This could help them consider the importance of a long term environmental responsibility at a younger age and actually be able to help make a change. I also wish to include an outdoor or semi-outdoor learning area where students explore sustainable design, build prototypes, grow plants, and learn through hands-on experiments. This can not only help students stay focused in nature, learn alongside the natural world but build a deeper personal connection with the same.

Rather than directing students toward a predetermined future, Kreation as a school would give them the freedom and resources to shape their own and let their personal interests shape their identity without any expectations to follow a certain cycle.
